

QOF BACK TO BASICS

The perfect session for beginners to QOF or for staff who are taking on more QOF responsibility

Overview:

As QOF has been around for many years now, we do take it for granted that everyone knows all things QOF.

However, we are increasingly asked for a QOF refresher course - essential for new members of staff or personnel taking on extra QOF responsibility but also relevant for existing staff, to re-emphasize and re-focus some of the key areas.

Throughout this seminar, Insight go back to basics, explaining what QOF is all about, as well as detailed explanations about prevalence, exception coding and data quality.

For existing members of staff, the information we discuss will not necessarily be new to them, however, it will certainly bring ideas back to the front of their memory, many of which can be quite important.

For new members of staff, this seminar will detail exactly what they need to know about QOF, they will return to their practice with a clear idea of their responsibilities & goals. It will also provide ideal networking opportunities with other local practices - vital for new staff.

This seminar is ideal for all members of the primary healthcare team, as well as any staff who provide support & guidance to primary care. It is also perfect for PLT sessions or individual practices as a group, as you will have opportunities to discuss any specific areas of concern.
